70,000 m² in Italy
active in 36 countries
150-strong team

The image shows the famous **Clock Tower** in **Venice**, located to the right of the St Mark's Campanile, whose gratings with antique finish were made entirely by Gridiron –

40 years of Italian history

The dynamism and tenacity of entrepreneur **Giancarlo Zanette** led to the establishment of Gridiron in **1979** in Mareno di Piave, **Italy**. Today it is active in over **36 countries around the world** as a pioneering company in the public and private **building** sector.

With a range of products that includes **gratings, drainage systems, entrance doormats** and **accessories**, Gridiron's creations embrace landmark buildings in central London, drain the waters of Genoa's **San Giorgio Bridge**, form oil platforms off the **Atlantic Ocean**, as well as blending functionality and aesthetics in luxury **public** and **private** structures.

Gridiron is still firmly led by the **Zanette family** with the vital support of the **150-strong** team based in the production, research and development areas across the various sites totalling some **70,000 m²** distributed throughout the North-East of Italy.

Vision

We are a dynamic and innovative company whose goal is to strengthen our position as leader in the national and international building sector, spreading a **new way of conceiving the product**. A broader vision, where **technical-functional performance** merge with **design** and **aesthetics**, where the guarantee of **excellent quality** involves not only the **product** but also all the additional **services** offered.

In doing so, we aim to contribute more and more to the **growth** and **satisfaction** of all **stakeholders**, from customers and suppliers to employees.

Mission

The key to our success, besides continuous research, rests in the ability to meet the **different needs** of the sector.

We manufacture and market **standard products** with a **high industrial value**, while offering a complete service - from design to implementation - in order to meet even the **most exclusive** and **complex** requests.

We create amazing works every day, which combine **high performance** and **aesthetics**.

The **City of Milan** has chosen channels in polymer concrete and stainless-steel gratings for a total of **3,200 metres** dedicated to the drainage of the **metro** –

Values

The passion for **excellence**, **research** and a **love of beauty**.

But also the professional **development** and **growth** of people, a focus on their **health** and **safety** in the workplace, whilst operating in a **sustainable** and **respectful** way.

These are the values that have shaped our business right from day one.

Milan Metro —

The combination of experience and knowledge

Our **unique** and **innovative** approach to the market is the result of being able to combine the two aspects that have made **Made in Italy** a global success story: the art of processing **raw materials** and **high-tech research**. This has allowed us to become **genuine experts** in new creations and is also the secret to our ability to work in a **flexible** and highly **customised** way.

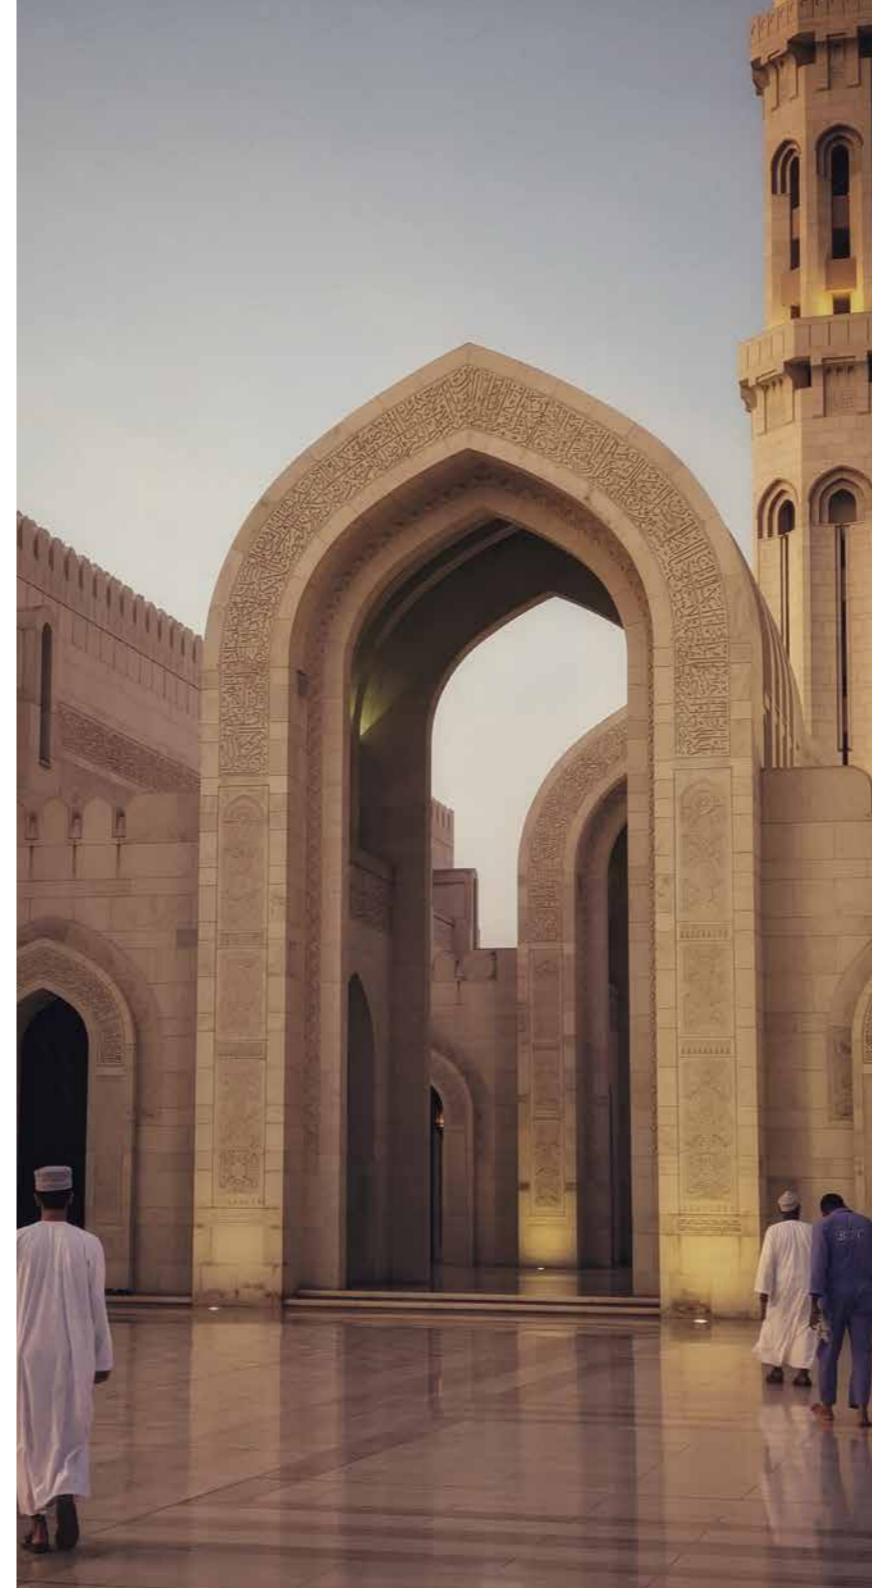

Knowing steel and working it in the production of **technical gratings**, over the years has led us to achieve new product categories: **drainage systems**, **building accessories** and **entrance doormats**.

In terms of drainage systems, being Gridiron's current flagship production, we started out as suppliers of covers but soon decided to bring the entire system production in-house, driven as always by the desire to be bearers of **exclusive know-how**.

Focus on one of Gridiron's creations at a **prestigious Italian university** —

Over the years, **new premises** have therefore been added, including that of Camponogara (VE) for the processing of **pressure locked grating** and of Spilimbergo (PN), dedicated to **research, development** and **production of concrete**. It is here that a broad range of products are forged, joining our gratings that have always been recognised as **premium products** on the market.

Gridiron services: going beyond the concept of product

From **design** and **installation** advice right up to **logistics**: Gridiron represents, above all, a strong and reliable partner for customers, who can rely on it for comprehensive **advice**.

We understood right from the beginning the importance of knowing how to offer a **product** in a much **broader sense**: not just a physical object but an entire ecosystem where **services, relationships** and **experience** come together as one.

The same **care, passion** and **skill** that we put into creating our products can be found in the **services offered** to our customers and in the resulting long-lasting **relationships** and mutual **respect**.

Our main services:

- Estimate analysis
- Study of the solution
- Design
- Load calculations
- Drafting of specifications
- Directions for installation
- Fast and "smart" logistics service

The industrial value

Gridiron grating is chosen by the best global **Oil&Gas** companies –

Certification in accordance with **ISO 9001** standard is a guarantee of retaining and continually improving the **quality** of its **goods** and **services**, achieved by **monitoring** all **processes** and measuring **results**.

In an increasingly complex and crowded global market, it becomes a major driver for **customers in choosing** a company, making its **high quality standard** and **reliability** official at an international level.

All our products are **CE** marked according to the respective reference standards: for **drainage channels** (EN 1433), for **gates** (EN 13241) and for **welded steel components** (EN 1090).

The latter, in particular, is further confirmation of our commitment to the **safety** of our **operators**.

Raw materials and technologies

From the start we have worked alongside **first-rate suppliers**, with whom we have forged relationships of trust and mutual **respect**: a further guarantee of **professionalism** and seriousness, which allows us to create **high-quality** products for our customers.

We work with **pickled** and **galvanised** coils of a **higher weight** than the market average, for machinery with greater performance along with better and significantly **longer-lasting** product **finishes**.

Furthermore, thanks to our **100% in-house production**, our creations can meet the needs of **all shapes** and **sizes**.

We choose **to test** each of our products within the company, in our **Research and Development department**, where we carry out examinations and tests that are **even more stringent than** those required by sector regulations.

We constantly invest in the implementation of **new processes**, in the introduction of **innovative software** and in the purchase of **latest-generation machinery**, with the latter being **re-engineered in-house**, ensuring that Gridiron products are of the utmost quality and cannot be reproduced.

Space Agencies also rely on Gridiron —

Our projects

Our projects

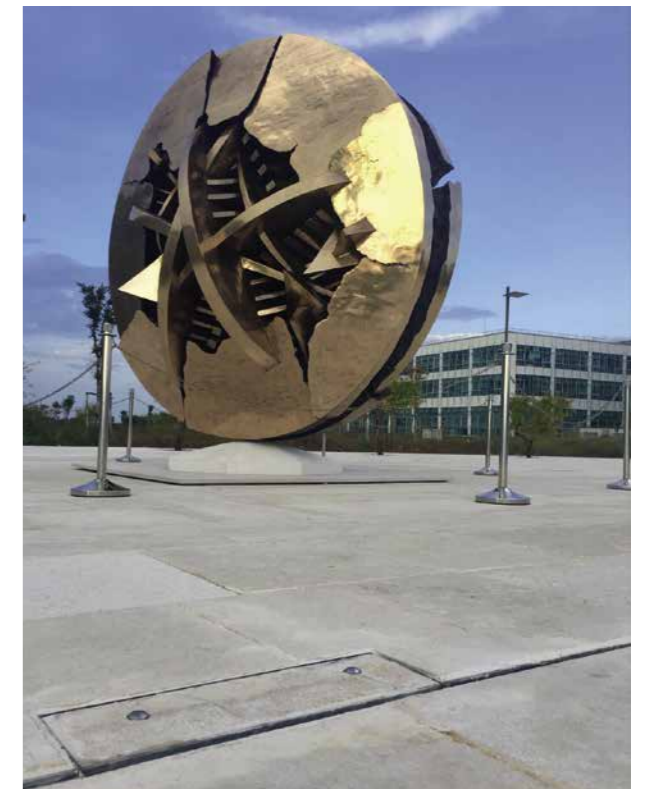

Drainage systems

We are the **only ones in Europe** to produce the **entire drainage** system: channels, sump units, accessories, profiles and gratings in galvanised or stainless steel. We also offer products in **three different materials: concrete (vibro-compressed and reinforced), polymer concrete and ABS.**

Standard products are flanked by unlimited **customisation** possibilities, so as to offer the ideal solution in any context, from **major works** to **exclusive projects.**

Some technical information on our standard channels:

- Height: from 60 mm to 1280 mm
- Width: from 100 mm to 800 mm
- Length: from 500 mm to 5000 mm
- Load classes: from A15 to F900

Clockwise from above.

Orio al Serio Airport — Gridiron's new systems that will be installed in the **Port of Liverpool** — Some of our channels, exhibited at the HQ Gridiron showroom — Thin cover, new Palazzo della **Regione Puglia** — Drainage system with Thin cover, the **Sultanate of Oman** — Gridiron channels have also been chosen by **Trieste Airport** — Drainage systems of the new **San Giorgio Viaduct**, in Genoa, one of the most important public works of the last century —

Our projects

Stainless steel drainage systems

A valuable material with exceptional performance: **AISI 304** and **AISI 316 stainless steel**.

Perfect to meet **aesthetic needs**, irreplaceable in all those sectors that require greater **resistance to corrosion**, and compliance with health and **hygiene regulations** (petrochemical, mining, pharmaceutical, agro-food industries, etc.).

At Gridiron, we take care of all phases - from the design to construction and advice on installation - of **standard** or **custom-made basins, floor channels** and **floor drains**.

Clockwise from above. Focus on one of the stainless-steel drainage systems — Custom project with "curved" channel in stainless steel for **luxury hotels** on the **Amalfi Coast** — Gridiron is present in top **wineries** and **hospitals** — Slotted channel in stainless steel for a custom project —

Our projects

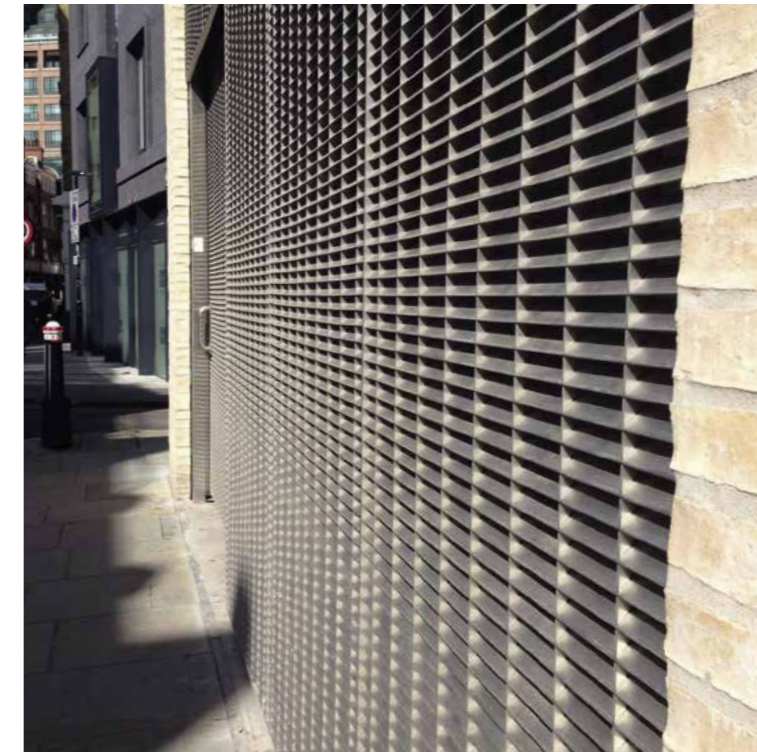

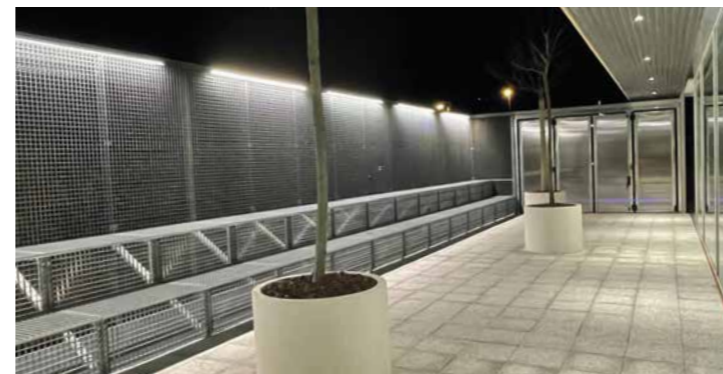

Gratings

Our **origins** are inextricably linked to producing grating that is extremely **versatile** and which we produce both **forge-welded** and **pressure locked**, as well as in different materials (**steel, stainless steel** and **aluminium**). We work with **pickled** and **galvanised** coils of a **higher weight** than the market average, for machinery with greater performance along with better and significantly longer-lasting product **finishes**.

We are also one of the leading European manufacturers of **sunscreens and ventilation**, offering a wide range of **stairs, fences** and **gates** for industrial and domestic use.

Some technical information on Gridiron gratings:

- Standard height of the bearing bar: from 20 mm to 150 mm
- Standard pressed mesh: multiple of 11 mm
- Thickness from 2 mm
- Load capacity: from pedestrian classes to heavy loads (trucks, articulated lorries, forklifts, etc)

Clockwise from above.
 Detail of the work created for the Museum of World War I, Passo Falzarego (**Cortina d'Ampezzo**) – Sunscreen fence for an elegant **bank, London** – Gridiron works with the **aerospace** industry – The art world also relies on Gridiron, **Triennale di Milano** – Technical gratings for a **designer hotel, Bassano del Grappa** – Gridiron gratings are also located in the new district created inside **London's Queen Elizabeth Olympic Park** –

Our projects

Accessories for the building sector

Over time, our range of **accessories** for the building sector has been expanded with new models of standard **manhole covers** and **plates** (standard production and **made-to-measure**), **window-wells** and **gratings**. The range includes state-of-the-art systems such as the "**Key**" manhole cover (**watertight**), the "**Green**" model (**drainage**, for the garden), the "**Valet**" (with **servo-assisted** lifting) and many others. As with all our products, we choose quality thick **galvanisation** (Z200), for a **longer-lasting** and a more refined **finish**.

Gridiron's standard manhole covers, available in different sizes, can reach D400 load class. There are endless possibilities for **customisation**, as well as choice of **sizes** and **materials** (galvanised steel, stainless steel, aluminium, brass).

Clockwise from above.
 Our **Green** manhole cover is specially designed to ensure proper turf drainage

Our projects

Entrance doormats

Strengthened by the know-how in the field of grating, our product range is topped off with the inclusion of **entrance doormats**, able to both meet every need in terms of **load capacity** and to create wonderful **design** effects.

A seemingly simple product that is actually able to completely **transform** the **space** in which it is placed. Our doormats combine **aesthetics, functionality** and **safety**, whilst all being equipped with a soundproof base.

They are available in different thicknesses, colours and types of coating (felt, brushes and rubber). They can even be made in any shape and size, in accordance with the customer's **specific needs**.

Whether it is the hall of a luxury **hotel**, the entrance to an **airport** or to **companies** and **buildings**, Gridiron will be able to support you from design to installation.
